

TECHNICAL BULLETIN

ENPHASE ENVOY UNBUNDLING

March 4, 2015 | Issue: 1034

Effective immediately, the Enphase Envoy Communications Gateway, power line communication bridge pair and wireless USB adapter are being sold separately. Previously, the Communications Gateway was available bundled with either a power line communication bridge pair (IC0302) or a wireless USB adapter (IC0493). The new configuration provides cost savings to users who connect the Envoy Communications Gateway to the Internet via the included Ethernet cable, and do not need the power line bridge or wireless adapter. It also makes inventory management more flexible.

Communication options

Direct Ethernet Link

The Envoy requires a connection to the Internet, usually through an existing broadband router or other access point at the installation site. This connection can be established by connecting the Envoy to a router using the included CAT5 Ethernet cable.

Power Line Communication Bridge

If the Envoy is located away from the router, at a distance where a direct Ethernet cable link is not practical, a pair of power line communication bridges allow the Envoy to communicate with the router over the power line. One of the bridges is plugged into the same AC outlet that the Envoy is using and connected to it via an Ethernet cable. The other bridge of the pair is connected via a second Ethernet cable to the router and plugged into the same AC outlet that the latter is using.

WiFi Adapter

Alternatively, the Envoy can communicate with the router via a wireless Ethernet bridge (also known as a “Wi-Fi USB stick”). To enable this link, the router or access point must support wireless connections (Wi-Fi).

PART NUMBER	DESCRIPTION	STATUS	WHOLESALE PRICE
IC0302	Enphase Envoy with Power Line Bridge	Obsolete	
IC0493	Enphase Envoy with WiFi adapter	Obsolete	
IC0551	Enphase Envoy Communications Gateway	New	\$569.66
IC0552	Enphase power line communication bridge pair for Envoy	New	\$41.56
IC0553	Enphase WiFi adapter for Envoy	New	\$41.56
